ABSTRACT Abstract text goes here. Summarise the motivation, approach, and main findings in a short paragraph.

Figure 1. Figure caption. Describe panels (a) and (b) and what the reader should take away.

1 INTRODUCTION

Introductory paragraph. State the problem, prior work, and the question this report addresses.

A second introductory paragraph expanding on context and outlining the structure of the remainder of the report.

2 RESULTS

Overview of the main results.

2.1 First result

Description of the first result. Replace with findings, figures, and interpretation.

2.2 Second result

Description of the second result. Replace with findings, figures, and interpretation.

3 METHODS

3.1 Model

Describe the model. Example equations are shown below; replace with your own.

$$\tau \frac{dx_i}{dt} = -x_i + \sum_{j=1}^N J_{ij} \phi(x_j) + \sum_{s=1}^{N_{in}} I_i^{(s)} u_s(t) \quad (1)$$

$$J_{ij} = \frac{1}{N} \sum_{r=1}^R m_i^{(r)} n_j^{(r)} \quad (2)$$

3.2 Training

Describe the training procedure. Hyperparameters are summarised in Table 1. An example forward pass is given in the

Table 1. Training hyperparameters.

Parameter	Value
Parameter A	value
Parameter B	value
Parameter C	value

listing below.

$$z(t) = \frac{1}{N} \sum_{i=1}^N w_i \phi(x_i) \quad (3)$$

```
def forward(self, u):
    # placeholder
    return z
```

Listing 1. Example code listing.

4 DISCUSSION

Discuss the implications of the results, limitations, and next steps.
